MAP Tutorial v4: create and finish SS-04 and SS-05

Oil Company LNG Field Development (MAP-PROJ-2026-MARINE-017). This version follows the latest prototype: empty parties and objects, the Third party role, suggested provider objects, date toasts, the Template Privacy card on Review, role counts on the Requirements tab, and demo template documents that are already submitted and verified so each person only handles the last three tasks.

1. The five sets

Set	Client	Provider / submitter	Verifier / Inspector	Approver
SS-01 LNG Transport Charter	Oil Co	Northwind	seeded	seeded
SS-02 Vessel Purchase (OSV)	Oil Co	Meridian Shipyards	seeded	seeded
SS-03 Terminal / Loading Ops	Oil Co	Harbourline Terminals	seeded	seeded
SS-04 Bunkering / Fuel Supply	**Northwind** (T. Okada)	**Oil Co** (J. Hale)	Coastal: N. Brooks / F. Ibarra	Coastal: C. Almeida (third party)
SS-05 IT / Control Systems	Oil Co (A. Okonkwo)	**Kestrel** (A. Petrov)	Sentinel: R. Singh / M. Laurent	Oil Co: K. Adeyemi

SS-04 shows the project owner acting as the **provider** on a set whose client is another organization (reverse roles). SS-05 is the normal direction with a third-party provider.

2. Before you start

• Log in (prefilled demo form, press Sign In). Use the sidebar **organization switcher** and the VIEWING AS persona pills. After switching organization, check the person name shown.

• **Do not refresh the browser.** Data lives in memory; a reload erases SS-04 and SS-05 and you restart at Section 3.

• SS-04 dates: 2026-11-12 to 2026-11-14 (SS-01 holds the Aurora from 2026-11-15). SS-05 dates: 2027-04-01 to 2027-06-30.

• Seed people and assets: vessel **BB Oilco Bunker Barge 01** (owner Oil Company) for SS-04, vessel **MV Kestrel Integrator** (owner Kestrel) for SS-05, Client Admins L. Moreau (Coastal), D. Varga (Kestrel), E. Navarro (Sentinel), P. Hartley (XY Marine Assurance).

3. What the wizard does now

Area	Behaviour
Parties	Starts empty (only your own organization). No Meridian, Harbourline, XY, Austral or Apex are added. Party-role dropdown: No party role / Requesting party / Responding party / **Third party**; several organizations can be Third party.
Approver rule	The Responding party, provider, vendor and object owners cannot be Approver (the box is disabled with a tooltip). The client or a third party approves. A third party such as Coastal Fuel Testing can be Verifier, Inspector and Approver together; only the client cannot verify and approve.
Errors	Pressing Next on General with no Verifier, Inspector or Approver shows the three "Select a ... organization." messages once, below the Parties table, and stays on General.
Dates	When one date forces another to move (start later than end, compliance deadline after start, template period) a **Date adjusted** toast says why. It closes by itself.
Template privacy	The Template Privacy and Distribution Scope card moved from General to the **Review** tab.
Objects	Starts empty. After you set the Responding party, a **Suggested from [provider]** list shows that provider's vessels, crew, equipment and activities with Add buttons, Add all, and Show more. Search still works.

Area	Behaviour
Template documents	SS-04 and SS-05 are created with every template task already submitted and verified (demo documents) except the **last three**. The three general documents are still open. This saves time in the demo.
Requirements tab	A red number beside the tab title shows how many items you must act on: Submitter = to upload, Verifier = to verify, Inspector / Approver = still open. Chips above the list show the breakdown.
Notifications	Wording matches the role: "You are assigned to upload the documents for ...", "... to verify ...", "... to inspect ...", "... to approve ...", "Choose an inspector for ..." for admins, and "The assurance set ... was created for your organization" for the client admin. Seeded sets (SS-01 to SS-03) now notify their assigned people and admins too.

4. SS-04 Bunkering / Fuel Supply (roles reversed)

Step A. Oil Co requests the set

• Organization **Oil Company**, persona **Client Admin** (A. Okonkwo). Open the project, click **Request Assurance Set**. The recipient list now shows only Client Admins of invited organizations.

• Recipient: **T. Okada, Northwind Marine Pty Ltd**. Send Request.

Step B. Northwind creates the set

• Organization **Northwind Marine Pty Ltd**. Either open the invitation in Notifications and click **Create Set**, or open the project: a recipient with an open request sees a **Create Assurance Set** button (Add Asset and Request stay hidden because Northwind does not own the project).

Wizard tab	What to do
1 General	Title **Bunkering / Fuel Supply**. Start 2026-11-12, end 2026-11-14, compliance deadline 2026-11-11. Try setting the end before the start: the toast explains the reset.
1 General: Parties	Add **Northwind Marine Pty Ltd** (Requesting party), **Oil Company** (Responding party) and **Coastal Fuel Testing** (Third party). Tick **Verifier, Inspector and Approver** on Coastal. Oil Company's Approver box is disabled. If you press Next without ticking, the three errors appear below the table only.
2 Objects	Empty at first. Under **Suggested from Oil Company** click Add on **BB Oilco Bunker Barge 01**, or search Bunker.
3 Requirements	Pick template **SS-04 Bunkering / Fuel Supply**. Eight tasks already show as verified. Check Responsible party is **Oil Company** on every open task.
4 Review	Check parties and roles. The **Template Privacy and Distribution Scope** card is here: leave Organization Only. Click **Create Assurance Set**.

Result: set **AS-2026-104**. The Requirements tab already shows 8 verified rows.

Step C. J. Hale uploads the open items

• Organization Oil Company, persona **Submitter** (J. Hale). The Requirements tab shows a red count (6): the 3 general documents plus the last 3 template tasks (Bunker Delivery Note and MARPOL sample record, Bunkering safety checklist and spill response plan, Supplier liability insurance).

• For each row click Upload, pick the sample file chip, **Read Document**, then **Upload Document**. The count falls to 0 and the stage moves to Verification.

Step D. Reviewers, inspection and approval

Who (organization / persona)	Action
L. Moreau (Coastal / Client Admin)	Notification: "Choose a verifier ..." where roles are pending. Open AS-2026-104, Details tab (Stage card is at the top), Stakeholders: Verifier **N. Brooks**, Inspector **F. Ibarra**, Approver **C. Almeida**.
N. Brooks (Verifier)	Notification "You are assigned to verify ...". Requirements tab: red count 6. PDF Review, Method Manual review, **Verify** each. Stage becomes Inspection.
F. Ibarra (Inspector)	Open Inspection, outcome **Pass**, Submit Outcome.
C. Almeida (Approver)	Open Approval, **Approve**. Status Approved, readiness 100%.

5. SS-05 IT / Control Systems (Oil Co is the client)

Create the set

• Organization **Oil Company**, persona **Client Admin**. In the project click **Create Assurance Set**.

Wizard tab	What to do
1 General	Title **IT / Control Systems**. Start 2027-04-01, end 2027-06-30, deadline 2027-03-31. Parties: **Oil Company** (Requesting party, tick **Approver**, it is the client), **Kestrel Control Systems** (Responding party), **Sentinel Cyber Assurance** (Third party, tick **Verifier** and **Inspector**). Kestrel cannot be Approver.
2 Objects	Empty. Use the **Suggested from Kestrel Control Systems** list and add **MV Kestrel Integrator**.
3 Requirements	Template **SS-05 IT / Control Systems**. Ten tasks arrive verified; the open ones are ISO/IEC 27001 certificate, Management of change procedure, and Professional indemnity and cyber insurance, plus the 3 general documents.
4 Review	Confirm the Template Privacy card, then Create Assurance Set.

Result: set **AS-2026-105**.

Flow after creation

Who	Action
A. Petrov (Kestrel / Submitter)	Red count 6. Upload the 6 open rows as in SS-04 Step C.
E. Navarro (Sentinel / Client Admin)	Stakeholders: Verifier **R. Singh**, Inspector **M. Laurent**.
A. Okonkwo (Oil Co / Client Admin)	Stakeholders: Approver **K. Adeyemi**.
R. Singh (Verifier)	Verify the 6 uploaded rows.
M. Laurent (Inspector)	Open Inspection, Pass, Submit Outcome.
K. Adeyemi (Oil Co / Approver)	Open Approval, Approve. Status Approved.

6. Other prototype changes you can show

Screen	Change
Create Project	**Commercial terms** (project value, currency, multi-year start and end, on-hire date) are optional, inside a collapsible bar that summarises what is filled in. Head contractor, Vendor and Other parties are dropdowns of the organization mock data.
Project page	Add Asset, Create Assurance Set and Request Assurance Set show only to the Client Admin of the project owner. A third party such as XY Marine Assurance sees the project read-only. An organization with an open request can still create the set.
Request recipients	Only Client Admins of the invited organizations are listed.
Set page	The Stage and Readiness card is the first thing on the Details tab.

7. Known limits

• The Task section removal on the Tasks tab (assurance set and project page) is not built yet.

• Demo documents are generated when you press Create; saving a draft does not create them.

• Do not refresh the page; the data is in memory.

• Unit tests were not run after these changes.
